Natural Protective Shield is an **innovative product range**, specifically developed to achieve **permanent protection against microbiological contamination**.

Facilities such as Gyms and Sports Centres are **inherently hazard-prone from bacterial transmission**, subsequently posing a health hazard for their patrons, as well as members of staff working there.

Gym equipment, workout machines, mats and floors are used by many people and microorganism concentration is very high, due to perspiration and rapid breathing. **Surfaces in these facilities are most likely to be contaminated by pathogenic agents, potentially harmful to human health, and therefore require attentive care.**

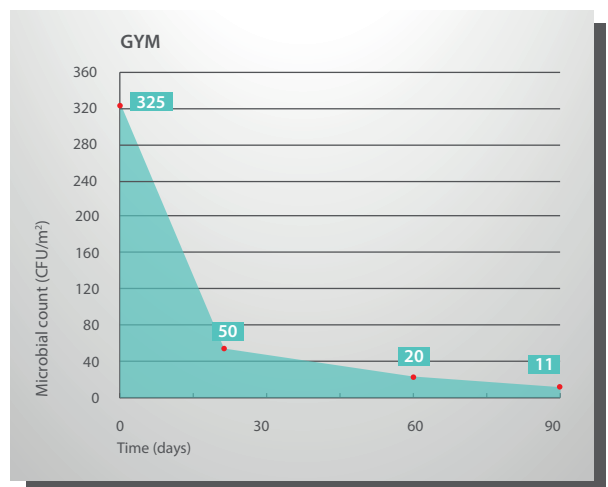

If they are not sanitized properly, those surfaces may become a fearsome vehicle of viral and bacterial transmission.

An **effective long-lasting solution** to the issue of surface sanitization in Gyms and Sports Centres

CASE HISTORY Rooms equipped for spinning and/or squash activities are usually poorly ventilated indoor spaces with glass windows and mirrors. Considering these environment features, we recommend applying the product to glass windows, floors - whether wooden, linoleum or other type of flooring - in order to effectively protect patrons from possible environmental bacterial contamination.

RESULTS The graph shows the time trend of the bacterial load on surfaces treated with NPS technology (Day "0" shows pre-treatment value).

Advantages of NPS treatment

24/7
active

36 months'
guaranteed
effectiveness

Effective against
micro-organic
proliferation

Effective
against
viruses

Ideal for
medical and
healthcare
facilities

Environment-
friendly

Suitable to any
kind of
surfaces

Easily used
on any
surface

Easier sanitation
and simpler
cleaning
operations

Lower
maintenance
costs
