Natural Protective Shield is an **innovative product range**, specifically developed to achieve **permanent protection against microbiological contamination**.

During worship service, **high attendance in places of worship such as churches, synagogues, mosques and temples** increases the spreading of viruses and bacteria into the environment.

These microorganisms settle on the surfaces which church-goers come into contact with, which makes these premises **contagion risk hotspots**.

Let us open wide the doors to worshippers and protect them from microbial contamination

CASE STUDY Places of worship are premises whose spaces are mostly shared by several people. Benches, doors, donation boxes and other items may be potential vehicles of contagion.

In this case we recommend applying the product to all benches and chairs (whether leather upholstered or made in other materials) in order to ensure worshippers effective protection from possible microbial contamination.

Advantages of NPS treatment

24/7
active

36 months'
guaranteed
effectiveness

Effective against
micro-organic
proliferation

Effective
against
viruses

Ideal for
medical and
healthcare
facilities

Environment-
friendly

Suitable to any
kind of
surfaces

Easily used
on any
surface

Easier sanitation
and simpler
cleaning
operations

Lower
maintenance
costs
