Natural Protective Shield is an **innovative product range**, specifically developed to achieve **permanent protection against microbiological contamination**.

Hairdresser, barber, beauty, nail and wellness salons and solariums are high-attendance places, which involves spreading viruses and bacteria in the environment. Furthermore, they represent the ideal habitat for the proliferation of all these microorganisms which are harmful for human health. What is more, **typical activities performed in these facilities involve direct skin contact with furnishing surfaces**, such as chairs, beds and sinks, used in facials, massage, manicure and pedicure, shampooing and other treatments, which **increases the chance of getting infections**.

Thus, these facilities require **appropriate sanitization of all surfaces** (floors, walls, glass panes), furnishings and workstations, which is essential to avoid any likelihood of microbiological transmission and protect the health of their patrons, as well as members of staff working there.

Protect your patrons and workers from microbiological contamination

CASE STUDY The booth where a beautician works is an enclosed space, often poorly ventilated, furnished with tabletops and countertops, beds and chairs where all the activities being performed may involve bare skin contact with beauty salon patrons.

In this case we recommend applying the product to the workstations -whether covered in leather or other material- in order to effectively protect patrons from possible bacterial contamination.

Advantages of NPS treatment

24/7
active

36 months'
guaranteed
effectiveness

Effective against
micro-organic
proliferation

Effective
against
viruses

Ideal for
medical and
healthcare
facilities
